

WHOLE HOUSE Surge Protection

Primary

External Protection - This is designed to reduce externally generated surges **before** they enter the house through the power line. In addition, ProTec offers primary protection for cable TV and phone lines, which minimizes risk and provides total utility surge suppression.

+

Secondary

Internal Protection (Outlet protectors) - The purpose of using outlet protectors indoors is to reduce surges inside the house and other stray surges such as from air conditioners cycling on and off. It is important to have sensitive electronics such as computers, stereos and TVs plugged into some type of outlet protector with a cable or phone in-out connection.
